

The Doctor Discussion Tool

Talking to your doctor about what may work for you

Choosing the right treatment requires meaningful discussions with your doctor and care team. Asking the right questions will help you make an informed decision with your doctor, and find a treatment that meets your goals.

Questions you may want to ask:

- What treatment options are available for PAH?
- What are the differences between prostacyclin analogue treatments?
- How do I fit treatment into my lifestyle?
- How long do I need to be on treatment?
- What has your experience been with this treatment?
- What side effects are associated with this treatment?
- Are there ways to effectively manage those side effects?
- What tests can be performed to see if my PAH is progressing?
- My symptoms aren't improving—is it time to look at my treatment plan?
- Is there any support or assistance?
- Can I talk to other patients who have been on this treatment?
